

## Access Control

For over 15 years Meesons have provided a complete range of access control solutions tailored to our clients' requirements for restricting people access. Meesons design comprehensive bespoke solutions from consultation through to installation and maintenance for any level of security control over **doors (internal & external), gates, ultra-sensitive environments and perimeters.**

### ELECTRONIC

From simple stand-alone external or internal keypads, cardswipes or proximity readers, through integrated online systems controlling 1-128 doors - (with roll call monitoring facility – locally or via wide area network) - to Interlocking systems controlling as many doors as required. All of which may be linked to fire or intruder alarms.

These products can be integrated with other access systems such as door operators, gates or barriers and offer easily programmable systems to allow staff to update information on demand.

### MECHANICAL

Stand-alone products free of the need for wiring or batteries. Once installed, the end-user has the ability to re-programme combinations on a

frequent basis to provide security in areas of high personnel volume.

### VIDEO

Video/Speech entry systems - for multi door applications.

### BIOMETRIC

Biometric reader technology restricts access and heightens security by using unique physical identity verification - Full integration is available with other access control systems.
