

Company Overview

History

Founded within the culture of "Little Mesters" in Sheffield during 1864, today Meesons are a key player in the UK security industry. With 7 generations of expertise we are here to help you find the correct solution that meets your needs.

Meesons has survived several transformations by holding fast to its core principles of individual client attention and market adaptation.

From our humble beginnings in a Sheffield steel factory we have adapted and grown through two world wars and the demise of the UK steel industry to become the provider of choice for high security entrance control systems. We count the "Big 4" financial institutions and the majority of the UK commercial investment banks amongst others as our valued clients.

Today we have developed our core product groups to deliver quality security systems to high demanding sectors. These sectors include key national infrastructure such as airports, data centres, central government and public services.

Meesons has established a nationwide presence through projects in the UK and Ireland. Our continued growth is expanding our reach to the International market with projects in the Middle East.

We will continue to offer unbeatable service and care, exceeding expectations from our smallest to our largest customer, whilst still offering the personal touch only a family firm can provide. We do this by listening and supplying you with a truly bespoke solution that matches your needs perfectly.

Meesons supply and install a wide range of quality and innovative products that help ensure your premises are safe and secure. From anti-tailgating products such as security portals and turnstiles to security glazed screens and counters we have a product to suit you.

Please ask us for details of our full product range:

- Anti-Tailgating Solutions
- Counters & Screens
- Automatic Doors
- Access Control

Anti-Tailgating products

Meesons' anti-tailgating systems can help you eliminate the threat of unauthorised access at the point of entry, before your security is breached.

From turnstiles and secure portals to our intelligent SMACS system, which uses advanced bio-visual sensor technology to identify individuals and ensure single transit through an exit. Meesons have a system to suit your organisation and budget.

Smart Access Control - SMACS

SMACS works by enhancing your existing security systems with an additional 3D recognition and bio-visual body mass analysis.

By interfacing with your existing access control solution, it can instantly and quickly scan a predefined floor area for single occupancy before instructing the access control system to unlock the requested door.

SMACS provides the most secure solution within an airlock lobby but can be employed on a single doorway to trigger an alarm upon a tailgating attempt.

Security Portals

Meesons offer a wide range of secure portals to meet the needs of any project.

Meesons' security portals are fully programmable and can incorporate biometrics, metal detection technology, bullet resistant and physical attack glass and multi-directional controls. Ensuring your building is protected against unauthorised access or attack. The portals can also be controlled remotely reducing the cost of onsite security supervision.

Meesons' portals can be integrated with any existing access control solution (including biometric readers) to prevent tailgating. Sophisticated ultrasonic sensors scan the cabin for the presence of two or more people, denying access if detected. Smooth flow ensures traffic consistently moves through the cabin swiftly and easily.

Turnstiles

When it comes to turnstiles, whatever the need; from construction site to prestigious corporate buildings, look no further than Meesons to provide the answer.

Meesons offer an unparalleled product range to suit all applications with the support and advice you would expect from the UK's leading provider of physical security solutions. From waist to full height and DDA access we have a solution for you.

Our turnstile security solutions are easy to use, robust and adaptable. They offer a practical and effective solution to meet the needs of any building or project.

Counters & Screens

Meesons have a range of counters, fixed and automatic glazed screens to suit all situations so we can help you find the right solution for your building.

We manufacture and install our entire range and ensure all our products are fully DDA compliant giving you peace of mind that you have not only a quality product but a product that meets your needs entirely.

A fixed screen can offer your employees protection but creates a barrier to your customers, which can have a negative effect on their experience.

Meesons automated glazed screens give you the freedom to open your reception to allow face to face contact but at the touch of a button, the screen can be closed, fully or partially, for the safety of your colleagues and assets.

Our fixed screens offer various levels of glazing protection to withstand any attack on your colleagues, ensuring their safety. However, the screen can be tailored to your needs by the inclusion of security doors, cash transfer trays and speech enhancement systems.

Automatic Doors

Meesons automatic doors are available in a wide range of styles and functionality. From swing, sliding, folding, telescopic and revolving doors we have a solution for you.

With experience installing automatic doors across the public and private sector you can rest assured that you will receive a quality product which is installed to the highest standard. Our range of automatic doors are also DDA and BS7036:1996 compliant.

For added security, Meesons can integrate our doors with your access control system giving you peace of mind that your employees and premises are safe and secure.

Access Control

The security and safety of your employees and property depends on ensuring that only those authorised can gain access to your building. But how do you stop unauthorised access?

Meesons supply and install a range of access control devices to help secure your building. From simple stand-alone keypads to integrated online control systems Meesons have a solution to suit your situation.

Electronic & Biometric Control Systems

Internal or external keyboards, card swipes, proximity readers and biometric authentication are all part of Meesons' access control armoury. Along with integrated online systems managing 1 to 128 doors, or interlocking systems which control as many doors as required. All Meesons' electronic control systems can be linked to intruder or fire alarms for added peace of mind.

With both stand-alone systems and complex integrated access control frameworks operating across a WAN, you benefit from highly accurate single mode and multi-modal biometric verification readers.

Mechanical Control Systems

Traditional mechanical, push button digital and high security lock cylinder suites still provide the backbone of many organisations' security portfolio.

Robust and of the highest quality, keypads are easy to re programme and are ideally suited for areas with mass people volume and low security zone areas.

Video and Speech Control Systems

For areas of low security where access is limited into one area Meesons recommend a cost effective solution such as a video and speech control system.

These systems are primarily used for residential or for commercial applications such as care homes, apartment blocks and multi office lobbies where there is a constant visitor flow to different locations.
